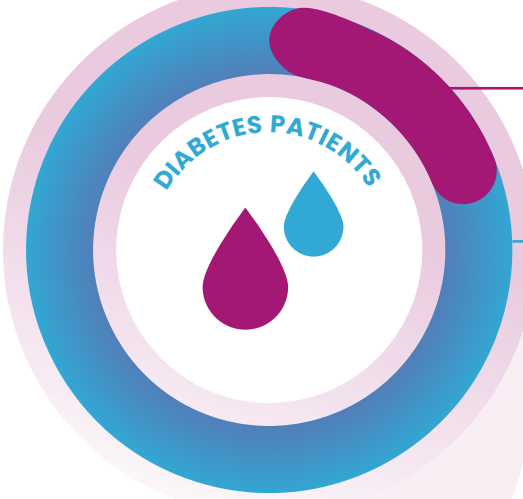
Prisma

UNDERSTANDING DIABETES

422M people

WORLDWIDE HAVE DIABETES

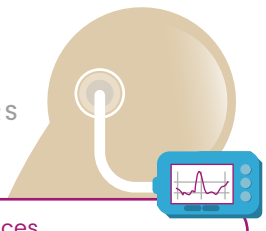


20%

INSULIN PUMPS USERS

80%

TRADITIONAL PENS AND SYRINGES USERS



Insulin patch devices represent an alternative to insulin daily injections with syringes or insulin pen, allowing reliable insulin therapy

increase of type 1 diabetes cases in young people

45,1%

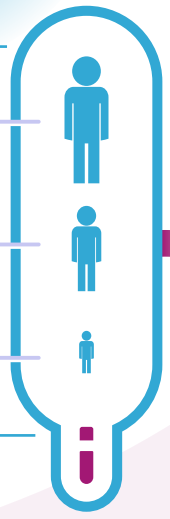
FROM 2001 TO 2017

PER 100 YOUTH

2,5 cases
2017

1,9 cases
2009

1,5 cases
2001



why?

- Occlusions may lead to serious consequences
- Big insulin pumps make the therapy visible
- Managing a pump therapy can be difficult, especially if done manually

Expected micro pump growth

FROM **1,5B$** in 2020

TO **6,3 B$** in 2028

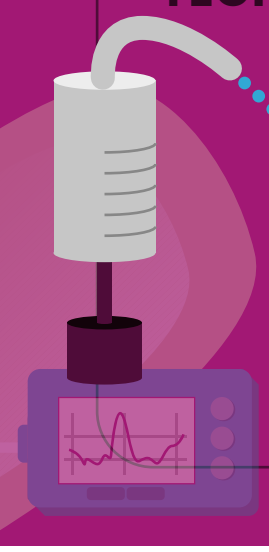
Prisma

is a revolutionary thin film micropump

which can be used as an innovative pumping system in wearable insulin delivery devices.

Prisma will introduce a breakthrough approach to the treatment of diabetic patients.

PATCH DEVICES BASED ON TRADITIONAL TECHNOLOGY

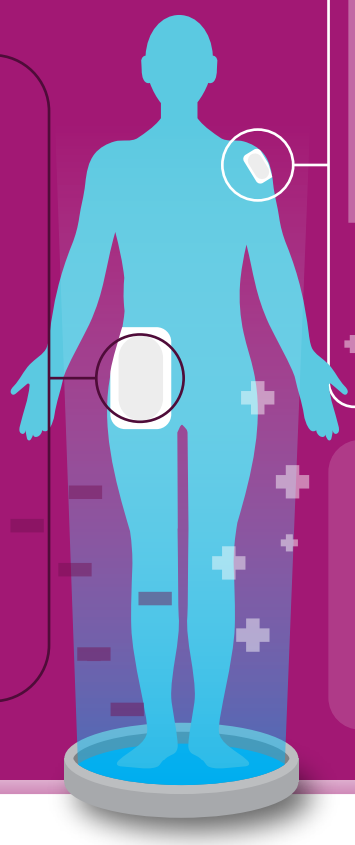


- Visible
- Non accurate
- Complex

The smallest pumps still occupy more than

50%

of the device's volume

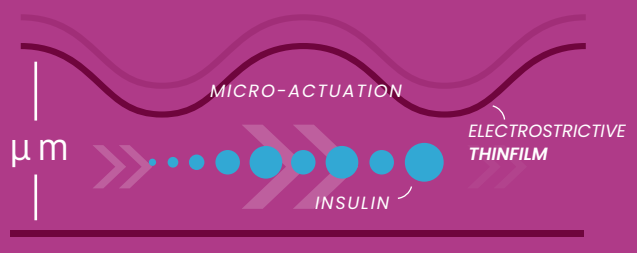


DEVICES BASED ON PRISMA MICRO PUMPING SYSTEM

- Size, way smaller and discrete
- Higher drug delivery accuracy, within the 5% expected range, even with the smallest flow
- Drastic reduction in energy consumption
- **PAVING THE WAY TOWARDS MULTI-HORMONE THERAPIES**

How does Prisma thin microfilm pump work?

The electromechanically active materials (thin film) generate a micro-actuation, making the liquid flow forward.



How Prisma will improve insuline therapy:

Discretness

The reduced size of Prisma allows for a free design of shapes that will result in a pump that the user can forget about

Reliability

The precise drug delivery will provide Prisma users with a reliable alternative to insulin pens

Simplicity

The reduced energy consumption, combined with the accuracy and size of Prisma, will allow for a better closed loop system that will simplify the user experience

Multi-hormone therapy

Thanks to the reduced size of the pump, multi-hormone therapy will become a reality soon
